AP 17-5 10.11.2026

The endocrine sys consists of cells, tissues & organs that secrete ~~horm~~ hormones as a primary or secondary function.

The endocrine gland → is the major player in this system

→ ① Ductless glands → prime function is to secrete their ~~horm~~ hormones directly into the surrounding fluid.

② ie. ~~#~~ The interstitial fluid & the blood vessels then transport the hormones throughout the body

Endo system: ① Pituitary ← Remember this
② thyroid
③ Parathyroid
④ Adrenal
⑤ Pineal

Some glands have both endocrine & none endocrine functions

Pancreas contains cells that function in digestion / & secrete hormones insulin & glucagon → reg blood glucose
