AP- 17-21 10.11.2026

Reproductive H, are steroids
~~tester~~ testosterone & estrogens-
produced by the gonads

The ~~ader~~ adrenal glands produce the steroid hormone aldosterone → involved in osmoregulation → & cortisol
metabolism

Steroid & Cholesterol are not water soluble
hydrophobic

Blood is H_2O based → lipid-derived hormones - must travel to their target cell bound to a transport protein.
Complex struct helps stableize ~~protein~~ Steroid

A hormone- derived hormone cortisol has the half life of approx 60 - 90 min
While an amino acid → Hormone → half life - is about 1 m.

Pathways of Hormone Action

The message a hormone is received by the a Hormone ~~recep~~ receptor, a protein on the cell membrane or within the membrane
