H. ~~recp~~ receptors recognize molecules with specific shapes/side groups → resp to those messengers.

~~The resp~~ The same type of receptor may be on another cell and the cell will resp diff

The resp ~~may~~ may include the stimulation of protein synthesis

activation/deactivation of enzymes - alteration in the permeability of the cell membrane, altered rates of mitosis & cell growth/stimulation & secretions of prods.

A single Hormone may be capable of inducing diff responses in a given cell.

Pathways Involving ~~Intr~~ Intracellular Hormone Recp

Intr. Cell ~~Rec~~ recepter are located Inside the cell.

Steroids/Hydrophillic can diffuse through the lipid bilayer → & reach the intracellular recepts.
