AP- 18.1, -2 10.12.2026

Blood is a connective tissue

It is made of up of cellular elements & an extracellular matrix

- formed Elements → red blood cells + white blood cells
- Platelets → cell frags
- Plasma → extracellular matrix { mostly water }

Functions of Blood → deliver O_2 & nutrients & to remove wastes from the body cells (somatic)

★ Includes defense
distro of heat
& maintenance of ~~homoe~~ homeostasis

Transportation → movement of gases / ~~enco~~ endocrine glands & release hormones - etc
moves CO_2 to lungs → waste products to kidneys - liver etc.

Defense WBC protect the body from extr threats
WBC seek out / destroy mutant cells
cells with viruses
etc.
