AP 18.1 - 5 10.12.2026

Bright Red rich with O_2

~~musky~~ dusky red not rich in O_2

This is because hemoglobin is a pigment that changes color → depends on O_2 saturation

Blood is about 5 x more viscos than H_2O → resistance to flow

plasma + proteins → impacts blood pressure flow of blood.

Blood runs slightly higher than normal body temp at about 38°C (100.4 °F)

37°C 98.6°F

pH of ~~boo~~ blood is about avg (7.4)

it can range from 7.35 - 7.45

blood is somewhat alkaline (basic)

contains buffers that regulate pH

Blood consistutes approx 8% of adult Body ~~wt~~ weight

5-6 liters in males

4-5 liters in females

Blood Plasma → composed mainly of H_2O

92 % of blood plasma is H_2O
