A different CSF induces the production of monocytes, called monocytes CSFs. Both granulocytes & monocytes are stimulated by GM-CSF
granulocytes - monocytes, platelets,
& ~~ertho~~ erthrocytes are stimulated by multi-CSF. Synthetic Forms of these hormones are often administered to patients with various forms of cancer are receiving chemotherapy to revive their WBC counts.

Interleukins → are also another class of cytokine signaling molecules importance → They were initially thought to be secreted uniquely by leukocytes & to communicate → only with other leukocytes & were named accordingly, but are known to be produced by a variety of cells including bone marrow & endothelium

some → new research → may play other roles in the body functioning, including diff → & maturation of cells
↳ producing immunity & inflammation → to date more than a dozen interleukins & maturation of cells → producing immunity & inflammation
↳ more than a dozen interleukins have been identified
