AP 18.4. 30 10. 13.
2026

or microglia depending on
their function →

They ~~lav~~ leave cappillaries → // via ~~emmigration~~
emigration
(from Latin)
removal

or via → **diapedesis**

dia = through peden → to leap
squeeze through adjacent
cells in blood vessels. walls.

after exists → Leukocytes → take up fixed up
positions in lymph tissue, bone marrow
the spleen, the thymus - & other ~~organs~~
ogans - ?

They can move ~~acco~~ around like amoebas
extending ~~ext~~ plasma membrane.

→ move towards via chemical signal

Positive Chemotaxis movement in response to
chemicals

The ~~T~~ diff counts of the types & ~~per~~ percentages of leukocytes, present are often key
indicators - making & selecting a treatment

The monocyte → an argranular leukocyte →
differentiates into a macrophage.

Classification of Leukocytes

→ leukocytes -
divided in two
groups

Granular leukocytes → contain abundant ~~grana~~
granules within the cytoplasm

neutrophils, ~~eson~~ eosinophils → &
basophils
