Agranular → leukocytes → include monocytes → which mature into macrophages → that are phagocytic & lymphocytes which arise from lymphoid stem cells line

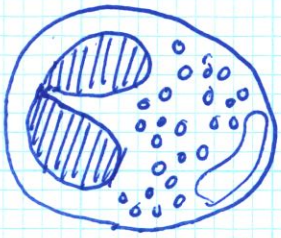

Granular Leukocytes → Granular leukocytes in order from most common to least common

granular leuks → are produced in the red bone marrow → & have a short lifespan of hours to days

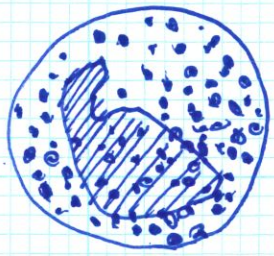

Typically have lobed nucleus & are classified according to which type of stain high lights their granules →

Neutrophil

Eosinophil

Basophil

neutrophils → has small granules - that stain light lilac & a nucleus - with two 5 lobes

Eosinophil → darker → stain orange-red two-3 lobes

Basophil → Large Granules → stain dark purple blue two lobes
