Another form of B cells → plasma cells produces the antibodies or immunoglobulins that bind to specific foreign or abnormal components of plasma - membranes.

Humoral → Body fluid → immunity. T- cells provide ~~cell~~ cellular- level immunity by physically attaching foreign or diseased cells.

A memory cell is a variety of Both B & T cells → forms after exposure to pathogen → & mounts rapid responses upon subsequent exposures

Memory cells → live longer - some may live a few / many years

Remember → B cells - mature in Bones (red marrow)
T-cells → in Thymus

* Smaller lymphocytes are either B or T cells, although they cannot be diff. in normal blood smear.

High lymphocytes → viral infections as well some type of cancer

low lymphocytes → HIV, immunosuppression drugs
drugs that involve steroids

Monocyte → originate from myeloid stem cells.
They normally represent 2-8 % of the total leukocyte count.

Typically → recognize large size 12-20 μm
indented or ~~horsh~~ horse shoe - shaped nucleic
