AP-18.4-38 10.13. 2026

Lymphocytes- are fully capable of mitosis & may produce clones of cells with identical properties →

→ This allows an individual to maintain immuni-ity for life!

Disorders of Leukocytes

Leukopenia → too few cells → unable to ward off disease

Excessive → Leukocytosis

leukocyte counts are high leaving the individual cells are none functional, risk to disease.

Leukemia cancer involving an abundance of leukocytes → may be specific ~~me~~ myeloid line →

myelocytic leukemia

lymphoid line → cronic leukemia mature leukocytes → accumulate & fail to die.

Lymphoma → is a form of cancer in which masses of malignant T & / or B lymphocytes - collect in lymph nodes → the spleen, the liver, & other tissues

As in leukocytes → do not ~~from~~ function properly.
