Extrinsic Pathway ⇒

The quicker responding ⇒ & more direct extrinsic pathway ~~fac~~ also tissue factor

begins with when damage occurs → to the surrounding tissues, such as in traumatic injury. Upon contract with blood plasma

The quicker ~~responsird~~ responding & more direct extrinsic pathway

begins when damage occurs → to the surrounding tissues - ⇒ such as trauma

Upon ~~contac~~ contact contract with blood plasma

the damaged ~~extrac~~ extravascular cells which are ~~intrist~~

↳ extinsic to the blood Stream

- ~~rea~~ release factor VII (~~prov~~ proconvertin)

↳ which is activated by factor III, which ~~add~~ are adding forming an enzyme complex

↳ this enzyme complex leads to activation of faxtor X - (Stuart - Prower factor)

↳ events of the extrinsic pathway are completed in a matter of seconds.
