A platelet plug can temp ~~seal~~ seal a small opening in blood vessels ->

Coagulation → more sophisticated & more durable repairs →

cascade event →

↳ one prompts the next → in a multi level waterfall

↳ produce → a gelatinous → but robust clot - made up of mesh -> of fibrin an insoluble filamentous protein derivided from fibrinogen.

fibrinogen is a robust clot made up from fresh fibrin

An insoluble filamentous - protein decived from fibrogen.

Re plasma - protein -> ~~introd~~ introduced earlier → in which platelets -> & blood cells are trapped

Clotting Factors → Involved in Coagulation

clotting factors -> prompt reactions that activate still ~~more~~ more coagulation factors ->
