The Cardiovascular System →

Greek-derived → Kardia

Heart Anatomy → The avg rate of contraction ~~of~~ 75 contractions per min. → 108,000 times in one day. more than 39 million times in one ~~day~~ year. 3 billion over a 75 year lifespan.

Each chamber → ejects about 70 mL of blood per contraction For a resting adult this would be 5.25 liters of fluid per minute → approx 14,~~000~~ liters per day.

10,000,~~000~~ → liters or 2.6 million gallons of blood sent through roughly 60,000 miles of blood vessels →

Location of the Heart → The Human heart is located within the thoracic cavity → medially between the lungs in the space known as the mediastinum

~~Parae~~ ~~Pericardi~~ Within the mediastinum the heart is ~~seperated from~~ other mediastinal structures by the Pericardium → tough membrane

of which sits in its own area → the [Pericardial sac] space called the pericardial cavity

dorsal surface of heart → near to vertebrae
anterior surface sits deep to the ~~ster~~sternum & ~~coast~~ costal cartilages

* The great ~~vien~~ → veins, i.e. the superior & inferior venae cavae The great arteries, the aorta & pulmonary trunk are attached to the superior surface of the heart, called the base *
