Ch. 15: 20
26

Female → 250 - 300 grams
Male → 300 - 350 grams

Hypertrophy → exercise ~~re~~ results - in the addition of protein ~~fi~~ myofilaments that increase the size of the individual cells without increasing their numbers a concept called hypertrophy

hypertrophic cardiomyopathy → The cause of abnormally enlarged heart muscle cause sudden death.

Human Heart contains 4 chambers
both left side/right side contain each an atrium & one ventricle

Each of the upper chambers, the right atrium (atria) & left ~~ventricle~~ atrium acts as a receiving chamber & contracts to push blood into lower chambers →
the right ventricle & left ventricles serve as the primary pumping chambers of the heart / propelling blood to the lungs or to the rest of the body.
two linked circuits → called pulmonary & systemic ~~circuit~~ circuits
View both circuits in term of gas

Pulmonary circuit → transports blood to & from lungs →

Systemic Circuit transports O_2 blood & returns. deO_2 blood + CO_2
