The superior Vena Cava, & inferior Vena Cava * return blood to the right atrium

The blood in the superior & inferior venae cavae flows into the right atrium which pumps blood into the right ventricle

This process continues (blood circ.) as long as the individual remains alive

* 2> The process of blood circulation continues as long as ~~the individual rem.~~ flow of blood through the Pulmonary & systemic circuits to all heath professionals

1. Blood flows from the ~~atrium~~ right atrium to the right ventricle. → where it is pumped into the pulmonary circuit

Blood in the pulmonary artery → branches — is low in O_2 → high in CO_2

Gas ex happens in the pulmonary capillaries

O_2 in, CO_2 ↗ out

Blood with high O_2 returned to the left atrium

Remember → left Atrium

↳ high O_2 blood

from left Atrium moves to left ventricle

which pumps to the systemic circuit
