AP 19.1 (6) 10. 15. 2026

Following exchange in the systemic capillaries →

O_2 & nutrients ~~of~~ out

CO_2 & waste → in

blood then returns to the right atrium & the cycle is replaced.

Membranes, Surface Features & layers

membranes → pericardium → membrane that surrounds & defines pericardial cavity → Pericardial Sac → It also surrounds the "roots" of the major vessels or the closest prox to the heart → translates to around the heart

consists of two ~~layers~~ / sub layers

The sturdy outer fibrous pericardium & inner

→ serous Pericardium → The ~~fibero~~ fibrous pericardium is made of tough, dense connective tissue protect & maintain position of heart

The serous Pericardium - consists of two layers

The parietal ~~part~~ pericardium → is fused to the ~~heart~~ to the fiberous pericardium
