AP(19.1)(24) The interventricular artery 19.16.2026
giving rise to branches that supply the interventricular septum & portions of both ventricles → presents views of the coronary ~~circ~~ circulation from both the anterior & posterior views.

Diseases of the Heart → Myocardial Infraction

heart attack → ischemia → hypoxia → death of cardiac muscle. occurs when build up of atherosclerotic ~~play~~ plaque → consists of lipids cholesterol & fatty acids + blood cells (white) primarily macrophage
can also happen when clot moves from larger vessel to smaller vessel,
sudden pain in (retrosternal) → Angina pectoris 5 radiating down left arm in males ~~& f~~ not in females
symptoms may include → (dyspnea) shortness of breath (palpations) → heartbeat (irregular) (syncope) fainting. → anxiety attacks → around 64% 22% ~~to~~ no symptoms

EKG - is used to confirm MI
these alterations in the ST - Q components
or to (STEMI) i.e. to as ST- elevated MI
along with non- elevated (none stemi) MI
In addition, echocardiography or cardiac magnetic resonance imaging may be employed.
elevated levels of creatine Kinase MB (enzyme that catalyzes the conv of ~~era~~ creatine to phospho creatin -e- consuming ATP and cardiac troponin (regulatin protein for muscle contraction.

Both are released by damaged cardiac muscle cells
