AP. 19.1(25) 10.16.2026

Aspirin + nitroglycerin admired under tongue could be because of release of NO_3 N_2O

LDL - bad cholesterol
low density

hypertensiony diabetes
Renal disease → M.
alcha a ~~lac~~ alcohol
~~con~~

Coronary ~~Viem~~ Viens drain the heart →

& generally parallel the large surface arteries. The **great cardiac vein**

↳ can be seen (initially) on the surface of the heart → 2> following the interventricular sulcus flows along the coronary sulcus into the coronary sinus on the posterior surface

The ~~gco~~ great cardiac ~~viem~~ vein initially parallels the anterior interventricular artery & drains the areas 2> supplied by the vessel.

~~Fl~~ receives → several major branches → including the posterior cardiac vien, the middle ~~cardi~~ cardiac vein. ~~The posterior~~ & the small cardia vein

The posterior cardiac vein ↳ parallels & drains the areas supplied by the marginal artery branch of the circumflex artery

middle cardiac vein → parallels & drains the areas supplied by the posterior interventricular artery

Small Cardiac Vein → ~~parett~~ parallels the right coronary artery & drains the blood from the posterior surface of the right atrium & ventricle.

The coronary sinus is a large - thin walled vein on the posterior surface of the heart lying within the atrioventricular sulcus & emptying directly into the right atrium
