AP - 19.2 (32) 10.16.2026

The electric event, the wave of ~~depol~~ depolarization, is the trigger for muscular contraction.

The wave of ~~dept~~ depolarization begins in the right atrium & the trigger for muscular contraction.

① The wave of ~~deplora~~ depolarization begins in the right atrium & the impulse spreads across the superior portions of both atria & then down through the contractile cells.

The contractile cells then begin contraction from the superior to the inferior portions of atria, efficiently pumping blood into the ventricles.

Antrioventricular (AV) node → is a 2nd ~~node~~ clump → of → specialized myocardial conductive cells.
